

'Smart' street works software comes to UK

Spanish software development company Bi-Tic have developed an innovative system to manage, administer and coordinate street work activities.

Controlled access to mapping information through eWise

Conceived by ACEFAT, the Barcelona Utilities Association, and developed by Bi-Tic, the 'eWise' system is a standard solution for the publication of information on existing underground services. Once installed, the system helps to manage administrative procedures and provides secure links to utilities' mapping information through a dedicated server. The system is designed to integrate with clients' existing systems and with local authority highway noticing procedures. Benefits of the system include reduced administration costs, reduced damage to existing services, speedier administration procedures, a safer working environment with reduced accidents, and an improved quality of service to customers and contractors.

Tried and tested over seven years, the software now services many of the major players in the Spanish water, gas, electric and telecoms industries including Aigües de Barcelona, Gas Natural, Red Eléctrica de Espana and Telefónica.

Let's turn it on!

Continuous growth and outstanding innovations on highest technical level will be presented at **VALVE WORLD EXPO 2014** in Düsseldorf. Valves, the whole range of equipment as well as up- and downstream technologies will take center stage. The **VALVE WORLD CONFERENCE** as major event of the valve industry analyses the markets' future, considering scientific evaluations. **Düsseldorf turns it on!**

**9th Biennial Valve World Conference & Exhibition
Düsseldorf, Germany, 2-4 December 2014**
